

User Manual

UIRI Inventory Management System

Enterprise operating guide for secure inventory, stock movement, reporting, and audit workflows.

Prepared For	Uganda Industrial Research Institute (UIRI)
System Scope	Inventory items, suppliers, stock in/out, requests, reports, analytics, audit trail
Campus Context	UIRI Nakawa and UIRI Namanve
Version	1.0
Manual Date	19 July 2026
Classification	Internal operating document

Security Operating Position

Users must re-authenticate after sign-out, session expiry, or returning to the login/landing screen. The current configured idle timeout is 7 minutes, matching the tighter controlled-database posture requested for the system.

This manual is written for day-to-day operators, stock officers, system administrators, and managers who need dependable, auditable use of UIRI IMS.

Contents

Section	Focus
1. Purpose and Governance	Manual scope, record discipline, roles, and expected controls.
2. Secure Access	Login, idle timeout, logout, session expiry, and password practice.
3. Navigation and Dashboard	Branch context, dashboard panels, risk cards, and live signals.
4. Inventory Item Lifecycle	Add, edit, filter, view, and print item-level records.
5. Stock Movement	Receiving stock, issuing stock, adjustments, and transaction evidence.
6. Management Workflows	Suppliers, requests, procurement, maintenance, transfers, users, and settings.
7. Reports, Analytics, and Audit	Printable reports, CSV exports, analytics, and traceability.
8. Daily Operating Controls	Routine quality checks before, during, and after system use.
Appendices	Screenshot register, role matrix, and field guidance.

Figure 1. Operating workflow from secure access through audit-ready oversight.

1. Purpose and Governance

UIRI IMS is the controlled inventory platform for recording institutional assets, stock balances, supplier records, stock receipts, issues, requests, reports, and audit evidence across the UIRI campus context.

Operating Principle	Expected Practice
Single source of truth	Inventory and stock movement records should be entered once, verified, and then used for dashboard, reports, and audit decisions.
Branch awareness	Confirm the active branch before reviewing, receiving, or issuing stock. Branch selection changes the operational context of displayed records.
Evidence before action	Use item details, supplier data, purchase information, and current stock before approving requests or issuing stock.
Auditability	Create, update, delete, login, stock movement, and reporting actions must remain traceable to the responsible user account.

Operating Principle	Expected Practice
Security-first use	Keep sessions short, never share passwords, and log out when leaving the workstation.

Role	Primary Responsibilities
Administrator	User accounts, permissions, branches, settings, audit review, and full system oversight.
Store / Inventory Officer	Inventory item creation, stock-in receipts, stock-out issues, supplier checks, and stock reconciliation.
Campus / Section Manager	Operational review, request tracking, stock risk monitoring, and report interpretation.
Procurement / Maintenance Officer	Supplier records, procurement follow-up, maintenance entries, and asset lifecycle updates.
General User	Submit or monitor permitted requests and maintain responsible use of assigned access.

2. Secure Access

Figure 2. Login screen shown when authentication is required or a session has expired.

2.1 Login and Re-authentication

Step	Action	Expected Result
1	Open the system URL.	The login screen appears before any protected module is accessible.
2	Enter the assigned username or email address and password.	The system verifies the account and opens the dashboard for the permitted role.
3	If the system reports an expired session, sign in again.	A fresh authenticated session is created and protected pages become available.

Step	Action	Expected Result
4	When work is complete, use the profile or logout control.	The browser returns to the login screen and the previous session is invalidated.

Idle Session Rule

The configured idle threshold is 7 minutes. If the user stops interacting with the system beyond this time, the session is considered inactive and protected pages require a new login.

2.2 Security Conduct

Do	Do Not
Use only your assigned user account.	Do not share passwords or allow another staff member to work under your login.
Lock the workstation when leaving the desk.	Do not leave a logged-in browser unattended in stores, procurement, or office areas.
Report unfamiliar records, unexpected deletions, or failed login patterns.	Do not ignore audit irregularities or repeated session warnings.

3. Navigation and Dashboard

Figure 3. Management dashboard showing branch context, inventory health, risks, pending requests, and movement signals.

Area	How to Use It
Sidebar	Move between Dashboard, Inventory, Stock, Management, and Reports modules. Expanded menu groups show the available pages for the user role.
Active Branch	Confirm whether the working context is UIRI Nakawa, UIRI Namanve, or all campuses before acting on records.
KPI Cards	Review total items, inventory value, stock risk, pending requests, monthly stock in/out, and missing purchase dates.
Operational Tables	Use request queue, priority stock decisions, supplier exposure, and status panels to identify records needing action.
Profile Area	Check the signed-in user and access account actions, including logout.

The dashboard should be the first review point at the start of each working session. It is designed for exception management: the officer should look first for pending approvals, low or out-of-stock items, maintenance exposure, and records with missing purchase evidence.

4. Inventory Item Lifecycle

4.1 Add a New Inventory Item

Add New Item

Dashboard / Inventory / Add Inventory

Add New Inventory Item

Register a new asset or consumable into the UIRI Inventory Management System.

ENTERPRISE FLOW LIVE PREVIEW

1. Basic Info 2. Location 3. Classification 4. Stock 5. Documents 6. Review

Basic Information

Capture the core identity of the inventory item.

Item Name * Item Code

e.g. Dell Latitude Laptop Auto-generated if left blank

Leave blank when adding a new item; the system will generate a unique code.

Model / Specs

e.g. Dell Latitude 7420, Core i5, 8GB RAM

Cancel Save & Continue Submit Inventory

Figure 4. Add Item workflow with progressive sections for basic information, location, classification, stock, documents, and review.

Step	Action	Quality Control
1	Click Add Item from Inventory Items.	Confirm that the active branch is correct before entering the item.
2	Complete Basic Info and Location.	Use official item names, department, section/unit, and storage placement.
3	Complete Classification and Stock.	Select the category, supplier, asset type, condition, current stock, unit, and minimum threshold.
4	Attach or confirm item image and identifiers.	Capture serial number, asset code, QR/barcode tag, purchase date, and warranty where available.
5	Review, then submit inventory.	Verify that the preview panel reflects the item exactly before saving.

4.2 Search, Filter, View, and Print Inventory

The screenshot displays the 'Inventory Items' page in the UIRI IMS system. The interface includes a sidebar with navigation options: Dashboard, Inventory (selected), Stock, Management, and Reports. The main area shows a list of 1,047 items, with the first five items visible. Each item row includes an item number, item name, category, campus, stock quantity, status (e.g., 'IN STOCK' or 'OUT OF STOCK'), and action icons for view, edit, and delete. Above the table, there are search and filter controls, including a search bar for asset codes and serial numbers, and dropdown menus for various filters like campus, department, and category. A 'Filter' button is present to apply the selected criteria.

Figure 5. Inventory list with filters, item status badges, and view/edit/delete actions.

Action	Use
Search	Find records by asset code, serial number, item name, category, supplier, or related reference text.
Filters	Limit the list by campus, department, section/unit, category, supplier, stock level, asset status, condition, and purchase date range.
View Details	Open the selected item's full record. This preview is the correct place to print the individual item summary.
Print Details	Print only the item currently open in the item-details preview.

Action	Use
Print Items	Print the list visible on the Inventory Items page. Filters should be applied before printing a filtered list.
Delete	Use only where permitted and confirm the deletion dialog after checking that the record is truly obsolete or duplicated.

Print Discipline

There are two print behaviours. Print Items is for the page list and its active filters. Print Details is for one selected inventory item opened from View Details. Do not use the page-list print when the required evidence is a single asset record.

5. Stock Movement Workflows

5.1 Receive Stock

The screenshot displays the 'Stock In' wizard in the UIRI IMS system. The interface is divided into a sidebar and a main content area. The sidebar contains navigation links for Dashboard, Inventory, Stock, and Reports. The main content area is titled 'Stock In' and includes a 'Record Stock In' section with a progress bar showing steps: 1. Product, 2. Supplier, 3. Reference, 4. Stock, and 5. Review. The 'Product Information' section includes fields for Product Search, Barcode Scanner, SKU, Category, Brand, and Unit of Measure. The 'Product Preview' section shows various stock-related metrics like Current stock, Min stock, Quantity in OEA, Projected stock, Last purchase, Last supplier, Last stock-in, Avg cost, Warehouse, and Grand total. A 'Recent Stock In' section is also visible at the bottom right.

Figure 6. Stock In wizard with product, supplier, reference, stock, and review steps.

Step	Action	Control Check
1	Select the branch and product.	Confirm item name, SKU, category, current stock, and minimum stock.
2	Select or confirm supplier.	Supplier information should match the procurement record or delivery documentation.
3	Enter reference details.	Capture purchase order, invoice number, receiving date, and supporting transaction notes.
4	Enter quantity and costing.	Check unit cost, tax, discount, total cost, and projected stock before continuing.
5	Review and save.	The stock-in transaction should increase the item balance and appear in recent stock-in records.

5.2 Issue Stock

UIRI IMS INVENTORY SYSTEM

ACTIVE BRANCH: UIRI Nakawa (HQ)

Stock Out
Record issued inventory and deduct quantities from the correct branch stock.

[View Transactions](#) [New Stock Out](#)

Issue Stock STOCK DECREASES

Record Stock Out

Recent Stock Out [View all](#)

DATE	PRODUCT	ISSUED BY	QTY
------	---------	-----------	-----

Figure 7. Stock Out wizard for issuing stock from available branch stock.

Step	Action	Control Check
1	Select the product and branch.	Verify available quantity before recording an issue.
2	Enter issue quantity and recipient context.	The issue should not exceed the available stock balance.
3	Capture reference information.	Use request numbers, department, section/unit, and remarks where applicable.
4	Review the stock impact.	Check after-issue stock, movement reason, and audit trail before saving.
5	Save transaction.	The stock-out transaction should reduce stock and appear in transactions, reports, and analytics.

5.3 Adjustments and Transfers

Workflow	When to Use	Evidence Required
Stock Adjustment	Correct verified stock count differences, damaged stock, or approved reconciliation changes.	Reason, quantity, item, branch, officer, and approval trail.
Transfer	Move stock or assets between campuses, departments, or sections where the system permits.	Origin, destination, item, quantity, transfer date, and receiving confirmation.
Transactions	Review the full stock movement history.	Date, movement type, item, quantity, user, and branch context.

6. Management Workflows

Figure 8. Suppliers table with search, action icons, status indicators, and consistent table styling.

Module	Purpose	Operating Notes
Suppliers	Maintain supplier company, contact, email, phone, TIN, and status.	Use view/edit icons for review and correction. Delete only after verifying that supplier links are no longer required.
Requests	Track internal stock or item requests.	Prioritise pending requests and keep approval, issue, rejection, or cancellation statuses current.
Procurement	Follow procurement-related inventory acquisition steps.	Reference purchase orders, funding source, supplier, and expected receipt dates.
Maintenance	Record equipment condition, service actions, repair status, and maintenance exposure.	Update asset status after inspection, repair, disposal, or recommissioning.
Transfers	Move stock or assigned items across approved organisational locations.	Check origin and destination, then confirm movement evidence.
Users	Create and maintain role-based access.	Use least privilege and deactivate accounts that no longer require system access.
Departments and Sections / Units	Maintain organisational structure used for reporting and assignment.	Keep names consistent with institutional naming to protect report quality.
Settings	Control system-level defaults where permissions allow.	Changes should be deliberate and auditable.

Deletion Confirmation Standard

Delete actions should present a clear confirmation panel before a record is removed. The officer must read the object name and consequence, then proceed only when the deletion is intended.

7. Reports, Analytics, and Audit

7.1 Reports

Figure 9. Reports module with filters, report tabs, Print/PDF, and CSV export controls.

Report Type	Primary Use
Inventory Summary	Board or management summary of active inventory state by branch, category, supplier, status, and filtered context.
Stock Movement	Evidence of stock receipts, issues, adjustments, and transaction movement over a selected period.
Stock Valuation	Financial view of inventory value, unit costing, quantity, category, and branch exposure.
Low Stock Report	Exception report for items below minimum threshold or out of stock.
Export CSV	Spreadsheet-ready data extract for further analysis, reconciliation, or appendix evidence.
Print / PDF	Formal printable output of the selected report with filters applied.

7.2 Analytics Command Centre

Figure 10. Analytics command centre with readiness score, filters, KPI cards, movement trend, and lifecycle charts.

Signal	Interpretation
Readiness Score	High-level indication of how complete and controlled the inventory records are.
Inventory Value	Book value under control for the selected filters and period.
Risk Exposure	Share of records requiring attention because of low stock, outage, maintenance, or non-working states.
Request Fulfilment	Conversion of inventory requests into issued or completed outcomes.
Data Completeness	Completeness of purchase dates and other evidence fields needed for audit and replacement planning.

7.3 Audit Trail

The audit trail should be reviewed by authorised users to confirm that major actions are attributable, dated, and aligned with business decisions. Pay close attention to account access, deletes, stock movements, and records changed shortly before reporting cycles.

8. Daily Operating Controls

When	Control Activity	Owner
Start of day	Sign in, confirm branch, review dashboard risk cards and pending requests.	Inventory Officer / Manager
Before stock-in	Confirm item, supplier, receipt evidence, quantity, price, purchase date, and storage location.	Inventory Officer

When	Control Activity	Owner
Before stock-out	Confirm available balance, request or issue authority, recipient context, and after-issue stock.	Inventory Officer / Approver
Before deletion	Open record details, check dependencies, read confirmation panel, and delete only when authorised.	Authorised User
Before reporting	Apply filters, confirm date ranges, verify printed summary, and export CSV where required.	Reports User
End of day	Review transactions, check exceptions, export required evidence, and log out.	Responsible Officer

Minimum Appearance and Data Standard

Tables used for operational review should show clear sky-blue headers, a gold divider under the header row, readable action icons, visible pagination, and consistent confirmation dialogs for destructive actions.

Appendix A. Screenshot Register

Figure	System Area	Purpose in the Manual
1	Workflow Overview	Shows the operating cycle from secure access to audit.
2	Login	Explains authentication, session expiry, and re-authentication.
3	Dashboard	Explains management review and operational signals.
4	Add Item	Shows the item creation workflow.
5	Inventory Items	Shows list filters, actions, and print distinction.
6	Stock In	Shows stock receipt workflow.
7	Stock Out	Shows issue workflow.
8	Suppliers	Shows supplier management and action controls.
9	Reports	Shows filters, printed reports, and CSV export.
10	Analytics	Shows readiness, KPI, and lifecycle analysis.

Appendix B. Key Field Guidance

Field	Guidance
Item Name	Use a clear, official item description that a reviewer can recognise without informal shorthand.
Asset Code	Use the institutional code assigned to the asset. Avoid duplicates.
Serial Number	Record the manufacturer's serial number where available; leave clear evidence when not available.
Category	Choose the most accurate category group to protect dashboard, analytics, and valuation quality.
Campus / Department / Section	Use the exact location hierarchy for assignment, custody, and branch reporting.
Supplier	Select the supplier that provided the item or the approved procurement source.
Purchase Date	Record actual acquisition date where available. Missing dates reduce audit readiness.
Minimum Threshold	Set a realistic control level so low-stock reports reflect operational need.
Asset Status and Condition	Update after maintenance, disposal, issue, repair, or inspection.
Audit Stamp	Confirm that saved actions are attributable to the responsible user.
